### Description

The CMDS Symposia were initiated in 1975. CMDS 11, organised in École des Mines de Paris, welcomed 66 participants from 14 countries. With the aim to stimulate interdisciplinary research, it gathered scientists in various areas (physics, mechanics, materials sciences, applied mathematics, engineering sciences), working on properties and applications of physical systems, where the interaction between a discrete and a continuous description plays a major role. These Proceedings collect the content of most lectures given at CMDS 11, and covering the following topics : statistical mechanics, mechanics of complex fluids, of solid microstructures and of granular media, fracture at different scales, modelling of living structures, of composite media and of metamaterials, leading to new optical or acoustical properties.

11 Wittgenstein (1953) → Constructivism → Games and Computers are governed by Rules . Prescriptive rules are the generic type of token commands (“in order to exit from . Not every game is a rule system and not every rule system is a game (e.g. Law). . 17 According to many scholars, gender is not a discrete category.
